

Aswin A

MERN Stack Developer

+91 9061765352 connectaswin.dev@gmail.com LinkedIn GitHub

SKILLS

Languages / Runtimes

- JavaScript
- Node.js
- HTML/CSS

Frameworks / Libraries

- React.js
- Express.js
- Redux
- Socket.IO
- ZegoCloud
- jQuery
- Tailwind CSS
- Bootstrap
- Multer
- Node-cron

Database / ODM

- MongoDB
- PostgreSQL
- Sequelize
- MySQL
- Mongoose

Network Protocols / API

- HTTP
- REST
- RPC

Architectural Patterns

- MVC
- Microservices
- API Gateway

CI / CD

- GitHub Actions

Container / Orchestration

- Docker
- Kubernetes

AWS

- IAM • EC2 • S3

Version Control

- Git • GitHub • GitLab

Payment Gateway

- Razorpay

PROFILE SUMMARY

Passionate and detail-oriented MERN stack developer with experience in building web applications. Skilled in JavaScript, Node.js, React.js and MongoDB. Strong problem-solving skills and ability to work in collaborative environments. Excited to contribute to innovative projects and continue learning new technologies.

EXPERIENCE

TEAM TWEAKS | Software Developer

- Developed and maintained **scalable web applications** using the **MERN stack**, ensuring high performance and reliability.
- Designed and optimized **RESTful APIs**, enabling seamless data handling and real-time updates.
- Built and enhanced **responsive UI components** with React.js and Tailwind CSS, improving user experience.
- Implemented **efficient data management strategies**, optimizing query performance and reducing load times.
- Deployed applications on **AWS**, ensuring scalability and system stability. with **cross-functional teams** to deliver user-friendly features and improve development workflows.
- Conducted **code reviews**, **debugging**, and **performance optimizations**, enhancing overall application efficiency.

PROJECTS

TWINDesk | Ticket Management System

- Designed and developed a comprehensive ticket management system with multiple modules, including Dashboard, Tickets, Agents, Access Logs, Categories, and Reports.
- Implemented dual login functionality for **Manager** and **Agent** roles, providing role-specific features and access controls.
- Built backend APIs to manage workflows such as ticket creation, categorization, assignment, and tracking.
- Developed dynamic dashboards displaying real-time metrics like ticket resolution times, agent performance, and activity logs.
- Created reporting features for managers to analyze ticket trends, agent productivity, and category-specific statistics.
- Ensured a responsive and intuitive user interface using **React.js** and **Tailwind CSS**, delivering a seamless user experience across devices.
- Utilized **PostgreSQL** with **Sequelize** for efficient data storage and management, optimizing database performance.

ZORO | Social Network for Bikers

GitHub

- Developed a social networking platform for bikers using the **MERN** stack with a **microservice architecture**.
- Orchestrated 8 microservices including users, posts, community, events, client, notifications, messages and admin functionalities.

EDUCATION

MERN Stack Development

Prototype, Ernakulam
Mar 2023 - Present

BBA - (Logistics and Supply Chain Management)

Bharathiar University
Aug 2020 - Nov 2023

- Implemented features allowing users to set their profiles as private or public, engage in real-time chat, receive notifications, join community groups and organize ride events.
- Planned and implemented the entire module with **REST APIs** for seamless integration with the web application.
- Containerized the project using **Docker** for efficient deployment and utilized **Kubernetes** for orchestration, ensuring scalability and reliability of the application.

SHOPZEN | E-commerce platform

GitHub

- Designed and developed an e-commerce application using **Node.js**, **MongoDB**, **EJS** and **Express** to enable users to purchase electronics products.
- Implemented a dynamic product detail page allowing users to select variants (such as color) for each product.
- Integrated a shopping cart feature enabling users to add products and proceed to checkout.
- Integrated **Razorpay** payment gateway for secure online transactions, including the use of coupons and wallet money for discounts.
- Implemented an order management system allowing users to view detailed order information post-purchase.
- Deployed the application on **AWS EC2** for reliable hosting and scalability.

MINI PROJECTS

WEATHER APP

GitHub

- Developed a weather application using **OpenWeatherMap API** to provide accurate and real-time weather information for specified locations.

NETFLIX CLONE

GitHub

- Built a **React**-based Netflix clone integrating the **TMDB API** for fetching movie data and trailers. Implemented **Axios** for API calls and designed an intuitive user interface similar to Netflix for seamless content browsing.

TO-DO APP

GitHub

- Created an efficient task management application using **React.js**, featuring task addition, editing and deletion functionalities within a user-friendly interface.
